PROJECT EXPERIENCE

- Overtime Request Information System
  The Overtime Request Information System is a web/mobile-based application used by employees to submit overtime requests digitally. The requests are then verified and approved by supervisors or HR. The system also calculates total overtime pay & generates reports for each completed overtime assignment by individual employees.

- Room Booking Management Information System
  The Room Booking Management Information System is a web/mobile-based application designed to manage room reservations online. It includes features such as checking room availability, booking requests, approval processes, and usage reporting.

- Attendance Information System
  The Attendance Information System is a digital-based system used to automatically and systematically record user attendance (employees/students). It replaces manual attendance methods to ensure greater accuracy & efficiency.
